

DILEMMA RESOLUTION MODEL

When we feel caught between the horns of a dilemma it's because we think we have to make a choice of **either** one thing **or** another. With a clear vision of the future we can 'dance the **and/both** dance' as appropriate to every step along the way.

When we move too far towards the **either/or** axes our vision enables us to get back on target, and as we make these corrections we can do some learning for next time.

Just as a rocket travelling to the moon is only 7% of the time on target because of gravitational forces etc, so, as we 'dance the **and/both** dance' we are rarely directly on target to our vision.
